

Just as good,
only better.

Tate & Lyle **ENRICH**[®] Solutions for Dairy

TATE & LYLE ENRICH[®] Solutions have been designed to help you take advantage of growing demand for foods that are 'good for you'. We'll help you develop your products to deliver the same great taste that your customers expect, while addressing today's top consumer health issues. And we'll help you ensure your products get to market fast.

Taste is still important

Research shows that while consumers are concerned with health and wellness, the majority will refuse to give up taste in favor of function. TATE & LYLE ENRICH[®] Solutions enable you to create products that offer both the added nutrients consumers want and the enjoyable taste of regular brands.

Prototyping for speed

We provide a rapid prototyping service to help you respond fast to consumer demands, and take products to market as quickly as possible. First we demonstrate the prototypes we have developed for the dairy market. Then we'll work with you to develop from those prototypes the ingredient systems that exactly match your brand objectives.

Addressing consumer demands

We've carried out in-depth research to discover what really concerns consumers today. Key areas in health and wellness are:

- Digestive health and immunity
- Obesity and weight management
- Children's health

Our nutritionists and applications teams have worked closely together to develop solutions across the food and beverage markets that best address these issues.

ENRICH[™] Digestive Health and Immunity Solutions

Helping to promote healthy digestion and potentially boost the immune system. We can include ingredients such as:

- fiber (prebiotic potential) combined with probiotic cultures to provide synbiotic benefits
- a new range of dietary fiber ingredients
- vitamins and minerals

ENRICH[™] Obesity and Weight Management Solutions

Aimed at maintaining the feeling of fullness for longer after eating, our solutions include:

- fibers and proteins to help promote satiety
- selected essential vitamins

ENRICH[™] Children's Health Solutions

Designed to contribute to the healthy development of children, these solutions include:

- fiber and protein
- nutrients such as choline, calcium and selected vitamins

ENRICH™ Solutions for Dairy

We've formulated the ENRICH™ Solutions for retail dairy products to enable you to add nutrients to a wide range of your products, including yogurts, smoothies and flavored milks – without losing taste. With these solutions, you could, for example:

- Pack chocolate-flavored milk or yogurt tubes with fiber, calcium, proteins, vitamins and choline – believed to support the healthy development of children. Optional omega-3 fatty acids can also be added
- Develop reduced-sugar, low-fat or fat-free yogurts that provide fiber, vitamins and minerals associated with good digestive health and immunity
- Produce low-fat smoothies and drinkable yogurts full of dairy protein and fiber that can promote feelings of fullness, and add B vitamins to aid metabolism

Prototypes ready to go

Available today for you to taste and assess are prototypes for yogurts, yogurt tubes, smoothies, drinkable yogurts and milk drinks.

Children's development

Kids will love the taste of **Yogurt Tube ENRICH™** and chocolate-flavored **Milk Drink ENRICH™**, while parents will be happy to know their children are getting nutrients to aid their healthy development. These prototypes include fiber, calcium, proteins, vitamins, choline and optional omega-3 fatty acids. Milk Drink ENRICH™ is also an excellent source of calcium, fiber and protein.

Digestion and immunity

Aimed at those keen to maintain a healthy digestive system and boost immunity, **Yogurt ENRICH™** is an ingredient system that allows for the formulation of low-fat (1.5 percent) or fat-free, reduced-sugars yogurts.

It's a great source of fiber (prebiotic potential) and it's formulated to work well with beneficial probiotic cultures. Yogurt ENRICH™ prototypes provide excellent levels of selected vitamins and minerals associated with digestive health and immunity, including Vitamins A, C, and E (which are antioxidants), Calcium, and Zinc. Tate & Lyle's SPLENDA® Sucralose delivers sweetness with reduced calories, while highly functional food starch ensures products are smooth and creamy, with maximum stability.

Weight management

Smoothie ENRICH™ and **Drinkable Yogurt ENRICH™** are designed to keep people feeling fuller and satisfied for longer, to aid a weight management program. The solutions are very good sources of dairy protein and fiber which are thought to provide satiety, and can contain a wide range of vitamins. Prototypes include Vitamins A, C, D and E, and a variety of B Vitamins, which support metabolism. Both products are low-fat and also high in calcium, which is often associated with health benefits such as bone strength and colon health.
